

Hello, chat.

I'm Domen.

Asst. Prof. Domen Lo, MA
Faculty of Design, Slovenia

What do I teach?

Class type?

Generative AI

When did it start?

Why teach this?

Hey, a magic box!

Why is this bad logic?

The abstraction paradox

So...

“AI” is not one technology

Three nested concepts

Symbolic AI:
intelligence as rules

Machine learning:
learning (sic) from examples

Deep learning: learning representations

Computer vision

Encoding, decoding, embeddings & latent space

Transformers and attention

GANs, LLMs

Diffusion models

Analytic AI to generative AI

Why generative AI changes design

The ethical & cultural questions

Who is the author?

Is it original?

Is it slop?

Is it good?

Is okay slop enough?

What remains human?

Perhaps...

How do we do it?

A new brain.

A private work.

$$48 > 192$$

You can control it.

It can automate.

Almost done ;)

Modify

Create a fashion line inspired by the moodboard featuring garments with structured silhouettes, tactile textures like tulle and ruffles, and a palette of muted forest green, deep brown, and weathered ivory, with an emphasis on rugged yet refined travel-inspired pieces.
